## Frame controller with convenient functions

### ◆Hot-swappable

Measurement modules can be inserted or removed without turning off the power. This hot-swapping capability makes it easier to reconfigure your system.

### ◆USB storage

The USB makes it easy to quickly save and load data. It saves measurement data in CSV and a screen shot in bmp, so that they can easily be imported into almost any PC application.

### ◆Multi user function

Up to 5 users can access to the same frame controller simultaneously.  
This function contributes to cost-saving and space-saving by sharing a frame.

### ◆Various remote interfaces

The AQ2211 and AQ2212 frame controllers are equipped with not only IEEE488.2 compliant GP-IB but also Ethernet and USB for remote operation.

# Powerful Features for Automated Testing

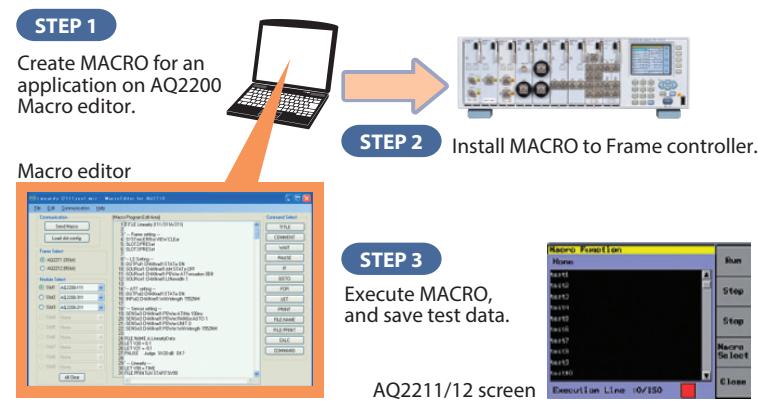

## Macro Programming Function

A macro program function makes it easy to build a simple automated measurement system by writing a series of operations in a program, setting measurement conditions, changing test configurations in combination with multiple modules, executing measurements, and saving results.

**Step 1:** Create a macro program using Macro editor, a PC application software.

**Step 2:** Install the macro program into Frame controller via GP-IB, Ethernet, or USB.

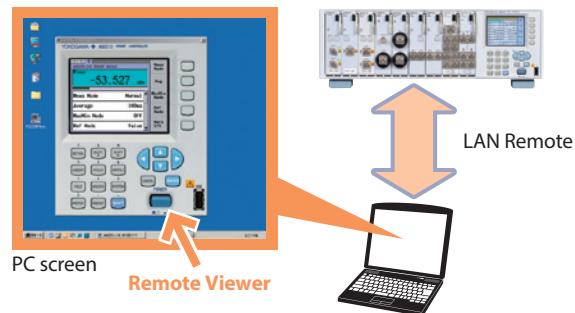

**Step 3:** Execute the macro program on the frame controller.

\*The Macro editor (free software) can be downloaded from our web site.

## Remote Viewer Software

The remote viewer software, a free PC application software, enables the AQ2200 Multi-Application Test System to be controlled from your PC via the Ethernet interface. When starting the software and setting up the connection properly, the front panel image of the connected frame controller is displayed on your PC monitor. Using a mouse, you can control the remote frame controller from your PC through operations that are similar to those for the front panel keys of the instrument. It is useful in case that you cannot see or operate the frame directly for the frame being mounted high up in the test stand.

\*The remote viewer software (free software) can be downloaded from our web site.

## Stability / Logging Function

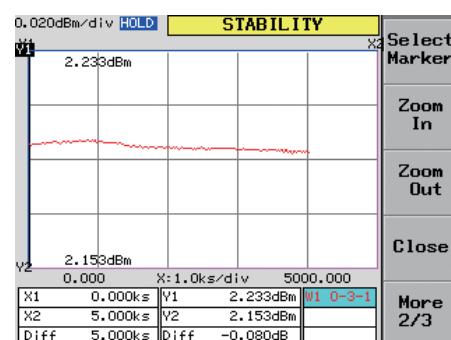

Stability and logging measure fluctuation in optical power.

### • Stability Measurement

By measuring the optical signal over a long period of time, you can check the optical power stability up to 99days.

### • Logging Measurement

By measuring an optical signal that fluctuate over very short periods of time, you can check the transient fluctuation or response with min. 100 $\mu$ s intervals.

# Measurement Applications

## Optical Fiber Amplifier Measurement System

An optical fiber amplifier is an indispensable device for WDM transmission systems. This measurement system characterizes gains and noise figures (NF) of the fiber amplifier by measuring input light to an optical fiber amplifier, which was multiplexed using multiple light sources, as well as amplified output light with an optical spectrum analyzer. A high-power sensor allows for measuring total output power.

### [Measurement items]

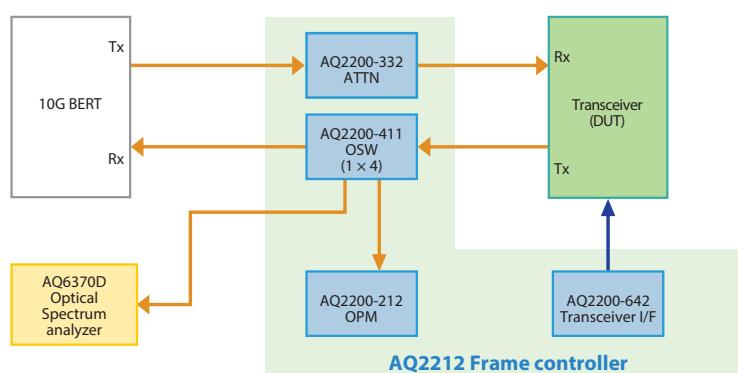

- Gain, NF, and total output power

## Transceiver Measurement System

The 10Gbit/s optical transceiver modules such as XFP or SFP+ are frequently used in transmission systems and Ethernet systems. The measuring system for such modules requires many instruments including controller, power supplies and multi-meters to control optical transceiver modules.

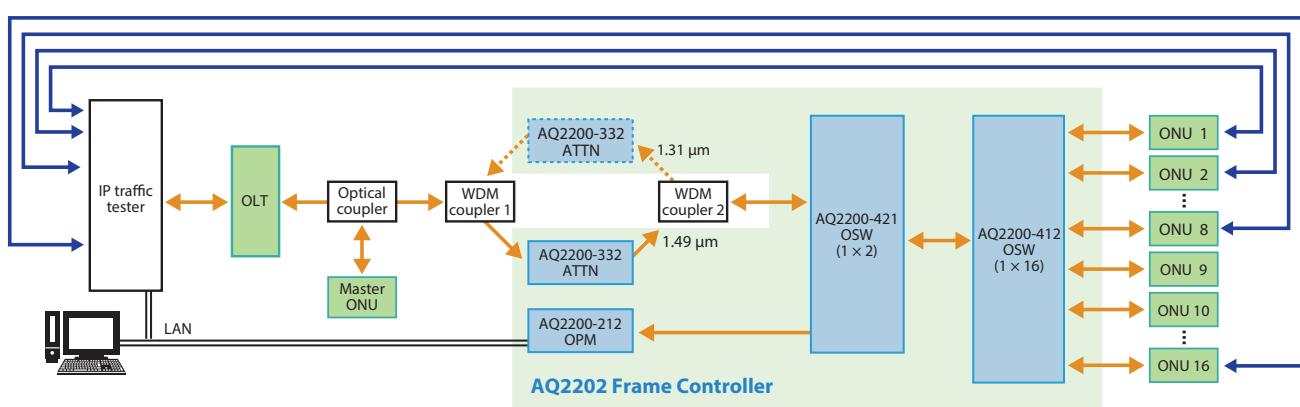

The AQ2200 Multi Application Test System allows for building a space saving test system with a variety of plug-in modules.

## GE-PON Test System

To evaluate GE-PON systems used for FTTH networks, optical characteristics and IP traffic tests are performed. Since a GE-PON consists of OLTs and multiple ONUs, efficient measurement of multiple ports is required. Utilizing the multiple port AQ2200-4xx optical switch makes it possible to build an efficient automated

measurement system by distributing the signal in a custom test network. Since the AQ2200-332 Optical Attenuator is equipped with a monitor power meter, the ONU optical receiving level can be adjusted without changing the fiber connection.

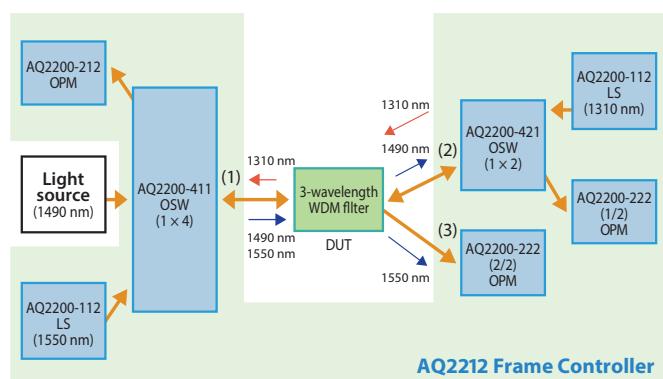

## 3-wavelength Optical Filter Measurement System for GE-PON

A 3-wavelength optical filter for GE-PON splits 1490 nm and 1550 nm optical signals, and pass a 1310 nm optical signal in the return direction.

This measurement system measures the insertion losses of wavelengths passing between ports and the isolation of wavelengths blocked.

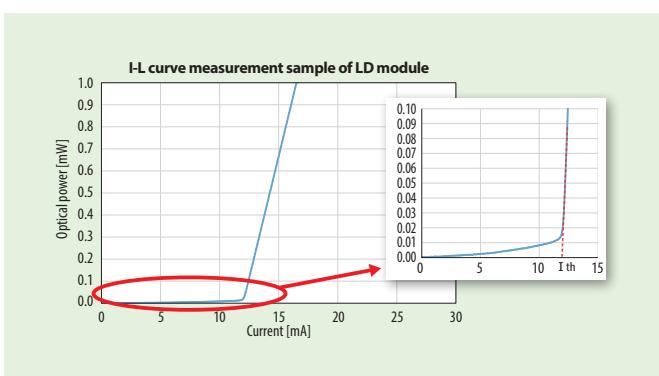

### [Measurement items]

- Insertion loss: (1) to (2) 1490 nm, (1) to (3) 1550 nm, (2) to (1) 1310 nm
- Isolation: (1) to (2) 1550 nm, (1) to (3) 1490 nm, (2) to (3) 1310 nm

## I-L curve of LD module

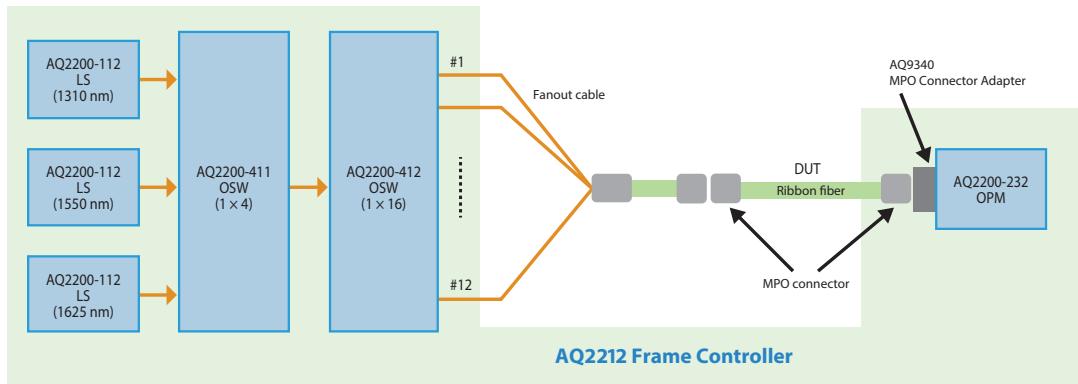

The I-L curve, drive current – optical power characteristics, of laser diodes can be measured accurately, quickly and seamlessly. Because, the single-range power range of an optical sensor and sensor head is as wide as 30 dB. It enables to measure signals close to a threshold value at high resolution without changing the gain of amplifier circuit which takes extra time.

## Multicore fiber loss measurement

MPO connector adapter, MT connector adapter and ribbon fiber adapter enable the measurement of the multi-fiber output directly.

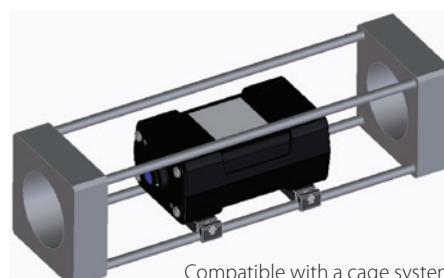

With the optical switch module, a multi-fiber loss measurement system can be easily configured.

## Free-space optics experiment system

In experiments of free-space optics, optical devices are set on an optical bench or a breadboard, and the adjustment of optical alignment is most time consuming work.

The optical sensor head AQ2200-232/242 is compatible with the 60 mm cage system. It make it easy to build a optical experiment systems by combining with various cage system parts in the marketplace.
